

Application No. 10/772,810Case No. N0187US**Listing of the Claims:**

1-24. (Canceled).

25. (Previously Presented) A computer-readable recording medium encoded with a computer program that performs a method, the method comprising:

obtaining data from a camera removably connected to a computer platform, the obtained data indicating geographic coordinates associated with each of a plurality of pictures taken by the camera;

requesting from a remotely located map service server a municipality name corresponding to the geographic coordinates associated with each of the plurality of pictures, the remotely located map service server including data that indicates whether a landmark is observable by a person from specific geographic coordinates; and

if the geographic coordinates associated with at least one of the plurality of pictures are determined to be coordinates from which the landmark is observable via a person's view based on the data included in the remotely located map service server, receiving data indicating a name of the landmark.

26. (Previously Presented) The method of Claim 25 wherein the camera is removably connected to the computer platform with a USB cable.

27. (Previously Presented) The method of Claim 25 wherein the camera is removably connected to the computer platform with a wireless connection.

28-30. (Canceled).

31. (Previously Presented) A computer-readable recording medium encoded with a computer program that performs a method, the method comprising:

obtaining data from a camera removably connected to a computer platform, the obtained data indicating geographic coordinates associated with a picture taken by the camera;

Application No. 10/772.810Case No. N0187US

requesting from a remotely located map service server a municipality name corresponding to the geographic coordinates associated with the picture, the remotely located map service server including data that indicates whether a landmark is observable by a person from said geographic coordinates; and

if the geographic coordinates associated with the picture are determined to be coordinates from which the landmark is observable via a person's view based on the data included in the remotely located map service server, receiving data indicating a name of the landmark.

32. (Previously Presented) The method of Claim 31, further comprising:
adding the name of the landmark to the picture.

33. (Previously Presented) The method of Claim 31, further comprising:
adding the name of the landmark and the municipality name to the picture.
